Strengthening Forensic Science in the United States National Research Council 2009-07-29
Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and

organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

An Introduction to Global Health Delivery Joia Mukherjee 2021-10-22 "In 2019, a child born in Japan will live to the age of 84, whereas a child born in Sierra Leone will only live until the

age of 54.1 Similar disparities exist between rich and poor communities within countries.² These differences in life expectancy are not caused by genetics, biology, or culture. Health inequities are caused by poverty, racism, a lack of medical care, and other social forces that influence health. A critical analysis of the historical roots of this gross and systemic inequality and of the political economy that continues inequality is a fundamental part of the study of global health"--

Perinatal Physiology Uwe Stave 2013-06-29 Living Nature, not dull Art Shall plan my ways and rule my heart -Cardinal Newman Nature and Art 1868 One of the ineluctable

consequences of growth in any field of science is that subjects of inquiry once established tend to give birth to subsubjects and that the subsubjects once established will in time undergo further mitotic division. Not so many years ago, problems surrounding the ietus and newly born infant lay in a realm almost to be described as a "no-man's land." Obstetricians properly gave major consideration to understanding and learning about processes and disorders concerned with maternal health and safety. The welfare of the infant was regarded as of secondary importance. Pediatricians on their part hesitated to invade the nursery, a sanctum regarded as belonging to the domain of the accoucheur. And the pathologist, enveloped in the mysteries of life and death in the adult, found scant time for the neonate and the placenta.

Caring for vulnerable babies Great Britain: National Audit Office 2007-12-19 This NAO report examines the reorganisation of neonatal services in England, and has set out a number of facts in regard of baby births. In 2006, 635,748 babies were born in England, with 62,471 babies, approximately 10% of all births admitted to neonatal units. Babies require neonatal care because they are premature, have a low birth weight or suffer from illness or a condition, such as a heart defect. The NAO also states that there is a trend in low weight babies increasing in the UK and other developed countries. Premature babies are the result of a number of factors, including maternal age, obesity, smoking, ethnic origin, deprivation and assisted conception such as IVF. Also, the number of women giving birth at 40 years of age or more has more than doubled since 1986. The NAO has set out a number of findings and recommendations, including: that there is a widespread support for neonatal services to be delivered through managed clinical networks, but these networks have evolved at different rates; most clinical networks have made progress in reducing long-distance transfers, but only half provide specialist transport services 24 hours a day, seven days a week; that there has been an improvement in communication between clinical networks; that there are still capacity problems that undermine the effectiveness and efficiency of neonatal care, and that this is often due to a shortage of nurses; that a greater account should be taken of parent's needs when neonatal care is required, such as communication with medical staff, information about the babies' care and accommodation for the parents; the

costs of neonatal services are not fully understood, and there is a mismatch between costs and charges.

Pediatric Dermatopathology Thuy L. Phung 2017-06-20 This book provides practicing pathologists, dermatologists, cutaneous oncologists and dermatopathologists with a reference textbook that reviews the clinical and histopathologic features of skin disorders that affect children, along with a discussion of the molecular pathogenesis for each disease as it is currently known. The book includes a concise discussion of the clinical presentation, as well as the histologic and, when appropriate, immunohistochemical features of each disease. The book is divided into two main sections, non-neoplastic and neoplastic skin diseases. Each section is comprised of a series of chapters organized according to histologic findings rather than by clinical classification systems. This will enable the practicing pathologist to browse chapters based upon observation of routine histologic patterns. Each chapter addresses the differential diagnoses of skin disorders with focus on salient histologic characteristics. The text is richly illustrated with over 1000 colorful clinical and histologic photographs for each of the 400 entities discussed. **Pediatric Dermatopathology** provides a microscope table reference for the practicing pediatric pathologist, general pathologist and dermatopathologist. Further, it will serve as a reference volume for dermatologists, pediatricians and oncologic surgeons.

Transcultural Midwifery Practice - E-Book Sarah Esegbona-Adeigbe 2022-03-17 With increasing diversity in the UK's childbearing population and ongoing racial disparities in maternal health outcomes, this new title will help both students and practising midwives

provide care that meets the needs of childbearing women and birthing people from different cultural backgrounds. The book lays the foundations for exploration of the many manifestations of transcultural care and how it relates to women, their families and societies. It covers everything that midwives need to know in order to be sensitive to and aware of cultural differences, needs and preferences during pregnancy and childbirth, ultimately enabling them to provide better care for all. Written by senior midwifery lecturer Sarah Esegbona-Adeigbe, an experienced practitioner in ethnic minority health, high risk pregnancy and the socio-cultural context of women's healthcare, *Transcultural care in midwifery practice* is destined to become a core text in midwifery courses. Covers main cultural competency models and how to apply cultural competency and cultural safety concepts to individual women Provides an overview of different cultures and religions to support cultural awareness and sensitivity Addresses barriers and ethical issues in midwifery care and how to mitigate them Packed with scenarios, case studies and activities to support learning Reflective activities in each chapter to reinforce cultural concepts
