**The Utopia of Rules** David Graeber 2015-02-24 From the author of the international bestseller *Debt: The First 5,000 Years* comes a revelatory account of the way bureaucracy rules our lives. Where does the desire for endless rules, regulations, and bureaucracy come from? How did we come to spend so much of our time filling out forms? And is it really a cipher for state violence? To answer these questions, the anthropologist David Graeber—one of our most important and provocative thinkers—traces the peculiar and unexpected ways we relate to bureaucracy today, and reveals how it shapes our lives in ways we may not even notice...though he also suggests that there may be something perversely appealing—even romantic—about bureaucracy. Leaping from the ascendance of right-wing economics to the hidden meanings behind Sherlock Holmes and Batman, *The Utopia of Rules* is at once a powerful work of social theory in the tradition of Foucault and Marx, and an entertaining reckoning with popular culture that calls to mind Slavoj Žižek at his most accessible. An essential book for our times, *The Utopia of Rules* is sure to start a million conversations about the institutions that rule over us—and the better, freer world we should, perhaps, begin to imagine for ourselves.

**The Presidentialization of Politics** Thomas Poguntke 2007-04-27 *The Presidentialization of Politics* shows that the politics of democratic societies is moving towards a presidentialized working mode, even in the absence of formal institutional changes. These developments can be explained by a

combination of long-term structural changes in modern politics and societies' contingent factors which fluctuate over time. While these contingent, short-term factors relate to the personalities of office holders, the overall political agenda, and the majority situation in parliament, there are several structural factors which are relatively uniform across modern nations. First, the internationalization of modern politics (which is particularly pronounced within the European Union) has led to an 'executive bias' of the political process which has strengthened the role of political top elites vis-à-vis their parliamentary groups and/or their parties. Their predominance has been amplified further by the vastly expanded steering capacities of state machineries which have severely reduced the scope of effective parliamentary control. At the same time, the declining stability of political alignments has increased the proportion of citizens whose voting decisions are not constrained by long-standing party loyalties. In conjunction with the mediatization of politics, this has increased the capacity of political leaders to by-pass their party machines and to appeal directly to voters. As a result, three interrelated processes have led to a political process increasingly moulded by the inherent logic of presidentialism: increasing leadership power and autonomy within the political executive; increasing leadership power and autonomy within political parties; and increasingly leadership-centred electoral processes. The book presents evidence for this process of presidentialization for 14 modern democracies (including the US and Canada). While there are substantial cross-national differences, the overall thesis holds: modern democracies are increasingly following a presidential logic of governance through which leadership is becoming more central and more powerful, but also increasingly dependent on successful immediate appeal to the mass public. Implications for democratic theory are considered.

*Managerial Imperative and the Practice of Leadership in Schools*, The Larry Cuban 1988-01-01 With this significant new work, Larry Cuban provides a unique and insightful perspective on the bridging of the long-standing and well-known gap between teachers and administrators. Drawing on the literature of the field as well as personal experience, Cuban recognizes the enduring structural relationship within school organizations inherited by teachers, principals, and superintendents, and calls for a renewal of their sense of common purpose regarding the role of schooling in a democratic society. Cuban analyzes the dominant images (moral and technical), roles (instructional, managerial, and political), and contexts (classroom, school, and district) within which teachers, principals, and superintendents have worked over the last century. He concludes that when these powerful images and roles are wedded to the structural conditions in which schooling occurs, "managerial behavior" results, thus narrowing the potential for more thoughtful, effective, and appropriate leadership. Cuban then turns to consider this situation with respect to the contemporary movement for school reform, identifying significant concerns both for policymakers and practitioners. This honest, thought-provoking book by a leading scholar, writer, and practitioner in the field represents an invaluable resource—an insightful introduction for those just entering the field and a fresh, new perspective for those long-familiar with its complexities. Cuban's ethnographic approach to

the development of his own career and viewpoint, as well as his highly readable style, make this a work of lasting value.

**Serving Citizens** Juan Carlos Cortázar Velarde 2014-09-19 This book focuses on civil service reform within the central administration in Latin America. It analyzes updated versions of the country assessments carried out by the Inter-American Development Bank in 2004 in 16 countries and presents a comparative analysis of the ways in which the countries have evolved during the last decade. The methodology is based on the principles of the Ibero-American Charter for Public Service. In addition, it draws lessons from reform processes, identifying strategies for civil service modernization in the region. Finally, the book proposes a possible future agenda to continue the efforts to further professionalize the civil service in Latin America.

**Strategic Human Resource Development** Jim Griesemer 2003-02-18 By challenging the reactive, prescriptive and formulaic theories of late 20th century change management, Strategic Human Resource Development seeks to draw the boundaries for a new discipline that views change as an internal and proactive approach to organizations.

**The Foundations and Future of Public Law** Elizabeth Fisher 2020-02-21 Public law in the UK and EU has undergone seismic changes over the last forty years: development and membership

of the EU, the Human Rights Act, devolution, the fostering of public law expertise within the judiciary, the globalization of public law, and the increased interaction between the academy, judiciary, barristers, public interest groups, and legislatures have transformed the public law landscape. Commentators spend much time at the frontiers of the subject, responding rapidly to new developments and providing guidance to scholars, legislators, and judges for future directions. In these circumstances, there is rarely a chance to reflect upon the implications of these changes for the fundamentals of public law and how those fundamentals relate to one another. In this collection, leading figures in UK and EU public law address this lacuna. Inspired by the depth, scope, and ambition of the work of Paul Craig, Professor of English Law at Oxford University, the focus of this collection is upon exploring and reflecting upon six fundamentals of public law and the interrelationship between them: legislation, case law, theory, institutions, process, and constitutions.

Distributed Leadership in Practice James P. Spillane 2007-08-03

Distributed leadership has become an important term for educational policymakers, practitioners, and researchers in the United States and around the world, but there is much diversity in how the term is understood. Some use it as a synonym for democratic or participative leadership. This book examines what it means to take a distributed perspective based on extensive research and a rich theoretical perspective developed by experts in the field. Including numerous case studies of individual schools and providing empirically based accounts of school settings using a distributed perspective, this thorough volume: Explores how a distributed perspective is different from other frameworks for thinking about leadership. Provides clear examples of how taking a distributed perspective can help researchers understand and connect more directly to leadership practice. Illustrates how the day-to-day practice of leadership is an important line of inquiry for

scholars and for those interested in improving school leadership. The Principles of Scientific Management Frederick Winslow Taylor 2016-03-10 It seems, at first glance, like an obvious step to take to improve industrial productivity: one should simply watch workers at work in order to learn how they actually do their jobs. But American engineer FREDERICK WINSLOW TAYLOR (1856-1915) broke new ground with this 1919 essay, in which he applied the rigors of scientific observation to such labor as shoveling and bricklayer in order to streamline their work... and bring a sense of logic and practicality to the management of that work. This highly influential book, must-reading for anyone seeking to understand modern management practices, puts lie to such misconceptions that making industrial processes more efficient increases unemployment and that shorter workdays decrease productivity. And it laid the foundations for the discipline of management to be studied, taught, and applied with methodical precision.

Global Corruption Gerry Ferguson 2018-02

The 9/11 Commission Report Thomas Kean 2012-02-10 Nearly three thousand people died in the terrorist attacks of September 11, 2001. In Lower Manhattan, on a field in Pennsylvania, and along the banks of the Potomac, the United States suffered the single largest loss of life from an enemy attack on its soil. In November 2002 the United States Congress and President George W. Bush established by law the National Commission on Terrorist Attacks Upon the United States, also known as the 9/11 Commission. This independent, bipartisan panel was directed to examine the facts and circumstances surrounding the September 11 attacks, identify lessons learned, and provide recommendations to safeguard against future acts of terrorism. The Structuring of Organizations Henry Mintzberg 1979 How do organizations structure themselves? A synthesis of the empirical literature in the field, supported by numerous examples and illustrations, provides images that produce a theory. The author introduces five basic configurations of structure - the simple

structure, the machine bureaucracy, the professional bureaucracy, the divisionalized form, and the adhocracy. This book reveals that structure seems to be at the root of many questions about organizations and why they function as they do.

Downsizing Democracy Matthew A. Crenson 2004-03-08

Originally published in 2002. In *Downsizing Democracy*, Matthew A. Crenson and Benjamin Ginsberg describe how the once powerful idea of a collective citizenry has given way to a concept of personal, autonomous democracy. Today, political change is effected through litigation, lobbying, and term limits, rather than active participation in the political process, resulting in narrow special interest groups dominating state and federal decision-making. At a time when an American's investment in the democratic process has largely been reduced to an annual contribution to a political party or organization, *Downsizing Democracy* offers a critical reassessment of American democracy.

Avenir de la Démocratie en Europe Philippe C. Schmitter 2004-01-01

Topics discussed include the impact of forces such as globalisation, European integration, migration and technological change; as well as issues such as citizenship (political discontent, cultural identity and protest), representation (political parties and civil society) and decision-making.

The Many Lives of Academic Presidents Clark Kerr 1986 The American college presidency is examined, with attention to characteristics of those who become college presidents, how long they serve and where they go after leaving the presidency, and internal/external factors affecting their performance. The analysis is based in part on 800 interviews with presidents, their spouses, and other close associates that were undertaken for a 1984 report, "Presidents Make A Difference: Strengthening

Leadership in Colleges and Universities." Brief notes on 24 college presidents illustrate the diversity of these leaders. Reasons presidents give for seeking/accepting and refusing presidencies are identified. The book also considers: experiences of new presidents; similarities between college presidents and corporate executives; general responsibilities of the executive group and board and core responsibilities of the president; skills required of the president; strategies and styles employed by presidents; historical trends affecting the presidency; external influences such as public regulation; internal influences such as student and staff input; four presidential models; and the context of 11 types of institutions. Appended materials include: advice offered by 16 presidents, attributes considered by presidential search committees, and a nine-page annotated bibliography. (SW): reprinted from ERIC.

Getting Textbooks to Every Child in Sub-Saharan Africa Birger  
Fredriksen 2015-05-22 Textbooks play a key role in enhancing  
the quality of learning, especially in the context of low-income  
Sub-Saharan African (SSA) countries characterized by large  
class-size, poorly motivated and inadequately trained teachers,  
and short effective school years. There are also high rates of  
illiteracy among parents and few reading materials at home for  
the student to bank on. Despite extensive investments by  
governments, the World Bank and other development partners,  
the majority of students in primary and secondary schools in SSA  
still lack the benefit of access to textbooks and the key reason for  
this shortage is affordability: textbooks are generally much more  
costly in SSA than in other developing regions. The need to  
increase access to key learning resources is of particular urgency  
because most African countries experience low learning  
outcomes which in part contributes to a high drop-out rate. Only  
two-thirds of those who enter school reach the final grade and  
only about half of these master basic numeracy and literacy  
skills. And although quality improvement depends on many  
factors inside and outside the school, there is wide agreement  
that availability of textbooks is both an indispensable and a cost-  
effective way of improving the quality of the learning process. A  
recent World Bank study examined the actual costs of textbooks,  
the scope for cost reduction, the portion of a national budget  
countries allocate to teaching and learning materials (TLMs) and  
hurdles in the way of making textbooks available to student.  
Some interesting findings from the study - - The availability of  
affordable textbooks to all students could be dramatically

improved by devoting an estimated 3 to 4 percent of the primary education budget and 6 to 7 percent of the secondary education budget - The production process †“ methods, copyright, length of print runs, effective procurement practices †“ rather than the production costs should be the target of cost saving strategies - The increased integration of ICTs into education in SSA can provide important opportunities for promoting availability of electronic TLMs but electronic TLMs are not a substitute for printed TLMs including textbooks

The Innovative Bureaucracy Alexander Styhre 2007-03-06 Highly original and based on unique empirical research in the fields of organization theory and organization behaviour, this work makes an invaluable contribution to the literature on bureaucracy and innovation. Focusing on a study of two major companies working with innovation and new product development Styhre's critical analysis pushes the boundaries of bureaucracy studies beyond its current entrenched position. Departing from the traditional view that bureaucratic organizations are inefficient, incapable of responding to external changes, unable to orchestrate innovative work and provide meaningful jobs for its co-workers, this empirical study underlines the merits of a functional organization, the presence of specialist and expertise groups and hierarchical structures. Analyzing the literature of bureaucracy, the new forms of post-bureaucratic organizations and drawing on the philosophy of Henri Bergson, the author offers a model of bureaucracy, capable of both apprehending its functional organization and its continuous and ongoing modifications and changes to adapt to external conditions. Innovative and compelling, this book is an excellent text for advanced students of organization and management theory and managerial strategists and decision-makers across the globe.

Considerations on Representative Government John Stuart Mill 1861 This book contains Mill's arguments in favor of a representative form of government, which was in Mill's view the ideal form a government should take. Mill thought that the best

government was whatever kind would contribute to the most happiness in a society, both on an individual and an overall level. Democracy in particular creates the most overall happiness because, in Mill's thinking, it encourages individuals to participate in society. By taking active and intelligent interest in social issues, individuals develop their natural "human sympathies," learn to consider the common good, and are able to enjoy the benefits of working together with others. These types of social feelings of well-being--so important to utilitarians like Mill--simply aren't possible under other forms of government.

Leadership and Growth David Brady 2010-01-04 Does leadership affect economic growth and development? Is leadership an exogenous determinant or an endogenous outcome of growth and development processes? Can we differentiate between the two? Do leaders decisions and actions vary in importance over various stages in the process, at least in successful cases? How important is choosing the right economic model? To what extent does leadership affect the explicit or implicit time horizons of policy choices? Is leadership an important determinant of inclusiveness in growth? In what ways do leaders build consensus or institutions to allow time for the economic plan to work? What challenges does economic success generate? How do successful leaders adapt to new problems such as income inequality and a rising middle class? Does the creation of new institutions play any role in solving these problems? Why do leaders often choose second best political economic compromises in economic development? This book has been prepared for the Commission on Growth and Development to evaluate the state of knowledge on the relationship between leadership and economic growth. It does not pretend to provide all the answers, but does review the evidence, identify insights and offers examples of leaders making decisions and acting in ways that enhance economic growth. It examines a variety of topics including leaders roles in: promoting national unity, building good solid institutions, choosing innovative and localized

policies, and creating political consensus for long run policy implementation. Written by prominent academics and actual policy makers, Leadership and Growth seeks to create a better understanding of the role of leadership in growth and to encourage further studies of the role of leadership in economic growth.

Extreme Programming Explained Kent Beck 2004-11-17

Governing by Network Stephen Goldsmith 2005-06-22 A fundamental, but mostly hidden, transformation is happening in the way public services are being delivered, and in the way local and national governments fulfill their policy goals. Government executives are redefining their core responsibilities away from managing workers and providing services directly to orchestrating networks of public, private, and nonprofit organizations to deliver the services that government once did itself. Authors Stephen Goldsmith and William D. Eggers call this new model “governing by network” and maintain that the new approach is a dramatically different type of endeavor that simply managing divisions of employees. Like any changes of such magnitude, it poses major challenges for those in charge. Faced by a web of relationships and partnerships that increasingly make up modern governance, public managers must grapple with skill-set issues (managing a contract to capture value); technology issues (incompatible information systems); communications issues (one partner in the network, for example, might possess more information than another); and cultural issues (how interplay among varied public, private, and nonprofit sector cultures can create unproductive dissonance). *Governing by Network* examines for the first time how managers on both sides of the aisle, public and private, are coping with the changes. Drawing from dozens of case studies, as well as established best practices, the authors tell us what works and what doesn't. Here is a clear roadmap for actually governing the networked state for elected officials, business executives, and the broader public.
