The Financial Crisis Inquiry Report Financial Crisis Inquiry Commission 2011-05-01 The Financial Crisis Inquiry Report, published by the U.S. Government and the Financial Crisis Inquiry Commission in early 2011, is the official government report on the United States financial collapse and the review of major financial institutions that bankrupted and failed, or would have without help from the government. The commission and the report were implemented after Congress passed an act in 2009 to review and prevent fraudulent activity. The report details, among other things, the periods before, during, and after the crisis, what led up to it, and analyses of subprime mortgage lending, credit expansion and banking policies, the collapse of companies like Fannie Mae and Freddie Mac, and the federal bailouts of Lehman and AIG. It also discusses the aftermath of the fallout and our current state. This report should be of interest to anyone concerned about the financial situation in the U.S. and around the world. THE FINANCIAL CRISIS INQUIRY COMMISSION is an independent, bi-partisan, government-appointed panel of 10 people that was created to "examine the causes, domestic and global, of the current financial and economic crisis in the United States." It was established as part of the Fraud Enforcement and Recovery Act of 2009. The commission consisted of private citizens with expertise in economics and finance, banking, housing, market regulation, and consumer protection. They examined and reported on "the collapse of major financial institutions that failed or would have failed if not for exceptional assistance from the government." Financial Strategies for Distressed Companies Salvatore Ferri 2021-02-23 The financial markets have undergone a significant development process, both qualitatively and quantitatively, and partly induced by major pushes for globalization and deregulation. In this context, finance has taken on an increasingly central role for companies and is now on par with production and sales, which have always been the cornerstones of business management. The effects of these structural and functional changes are not limited to the way companies operate, but also imply a change in corporate cultures; one consequence of this phenomenon is the large percentage of managers from the world of finance at the top tiers of corporate organizations. Moreover, environmental turbulence has forced companies to increasingly face negative situations characterized by economic and financial imbalances that may require far-reaching strategic changes. The purpose of this book, therefore, is to investigate the possible financial strategies that companies in distress can adopt; in this regard, it approaches financial strategies as opportunities to resolve and prevent difficult situations for the company. After having systematized the financial strategies and policies used in the governance of companies, the book analyzes both crises and turnaround processes, describing the path until the financial balance is restored. Finally, the authors analyze essential tools for the financial management of companies in trouble, focusing in particular on operational tools for managing the crisis, the recovery plan, and its monitoring.

Corporate Finance Sunil Mahajan 2020-07-31 The book introduces corporate finance to first year students in business schools. Basic subjects such as marketing, human resources and finance are all fundamental to the learning of a business manager. A book on these subjects must emphasise learning that is conceptual in nature and at the same time, application oriented. This book attempts to achieve this in a manner that is comprehensive and shorn of complexity. It examines the practice of finance without diluting theory and conceptual knowledge. Corporate finance is necessarily quantitative in nature and the book duly places emphasis on that aspect. It ensures the primacy of ideas and concepts utilising numbers as supportive elements.

The Role of Governance Structure in the Context of Crisis Management Pedram Faghouri 2012-11-27 ? Both practitioners and scholars agree that organizations that are ready to cope with crisis should be better able to manage it than organizations which are not prepared. As, due to their company characteristics, family businesses are exposed to additional causes of crisis beyond the usual causes all companies face, preparing for crisis is of specific importance to them. Based on empirical investigations, Pedram Faghouri shows that non-family businesses are more likely to prepare for crisis when compared to family businesses. The author's findings let further suggest that the existence of a supervisory board has a positive effect on the degree of crisis readiness of a family business. Moreover, in family businesses with supervisory boards, the involvement of family members in the top management team seems to have a negative effect on the degree of crisis readiness.

It is also suited for academicians, researchers, and students in the field of management.
