Critical Thinking Within the Library Program John Spencer 2014-10-20 While academic librarians frequently discuss critical thinking and its relationship to information literacy, the literature does not contain an abundance of sources on the topic. Therefore, this work provides a current and timely perspective on the possible roles of critical thinking within the library program. The work contains a variety of approaches likely to benefit the practicing librarian. It begins with a review of the literature, followed by theoretical approaches involving constructivism and the Socratic method. Readers will find pieces on the integration of critical thinking into the first-year experience and course-specific case studies, as well as a selection on a campus-wide critical thinking project. In each of the pieces, librarians are exploring new ways to meet their instructional goals, including the goal of teaching critical thinking skills to students across the curriculum. This book was originally published as a special issue of *College & Undergraduate Libraries*.

Teaching Big History Richard B. Simon 2014-12-23 Big History is a new field on a grand scale: it tells the story of the universe over time through a diverse range of disciplines that spans cosmology, physics, chemistry, astronomy, geology, evolutionary biology, anthropology, and archaeology, thereby reconciling traditional human history with environmental geography and natural history. Weaving the myriad threads of evidence-based human knowledge into a master narrative that stretches from the beginning of the universe to the present, the Big History framework helps students make sense of

their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them. Teaching Big History is a powerful analytic and pedagogical resource, and serves as a comprehensive guide for teaching Big History, as well for sharing ideas about the subject and planning a curriculum around it. Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around Big History. The book includes teaching materials, examples, and detailed sample exercises. This book is also an engaging first-hand account of how a group of professors built an entire Big History general education curriculum for first-year students, demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning this incredible story can be transformative for professors and students alike.

Creating Self-Regulated Learners Linda Nilson 2013-10-01 Most of our students neither know how learning works nor what they have to do to ensure it, to the detriment both of their studies and their development as lifelong learners. The point of departure for this book is the literature on self-regulated learning that tells us that deep, lasting, independent learning requires learners to bring into play a range of cognitive skills, affective attitudes, and even physical activities – about which most students are wholly unaware; and that self-regulation, which has little to do with measured intelligence, can be developed by just about anyone and is a fundamental prerequisite of academic success. Linda Nilson provides the theoretical background to student self-regulation, the evidence that it enhances achievement, and the strategies to help students develop it. She presents an array of tested activities and assignments through which students can progressively reflect on, monitor and improve their learning skills; describes how they can be integrated with different course components and on various schedules; and elucidates how to intentionally and seamlessly incorporate them into course design to effectively meet disciplinary and student development objectives. Recognizing that most faculty are unfamiliar with these strategies, she also recommends how to prepare for introducing them into the classroom and adding more as instructors become more confident using them. The book concludes with descriptions of courses from different fields to offer models and ideas for implementation. At a time of so much concern about what our students are learning in college and how well prepared they are for the challenges of tomorrow's economy and society, self-regulated learning provides a reassuring solution, particularly as studies indicate that struggling students benefit the most from practicing it.

Handbook of Research on Advancing Critical Thinking in Higher Education Wisdom, Sherrie 2015-07-17 The importance of critical thinking has surged as academics in higher education realize that many students, upon entering college, lack the critical thinking skills necessary to succeed. While much has been written regarding the 'lack' of critical thinking, less has been written on the success of methods implemented to develop this fundamental skill. The Handbook of Research on Advancing Critical Thinking in Higher Education explores the effective methods and tools being used to integrate the development of critical thinking skills in both undergraduate and graduate studies. Due to the difficulties associated with teaching critical thinking skills to learners of any age, this publication is a crucial addition to the scholarly reference works available to pre-service and early career teachers, seasoned educational professionals, professors across disciplines, curriculum specialists, and educational administrators.

Those Who Can Neil Bright 2013 In any endeavor, it is difficult to know what excellence is without knowing what excellence looks like. Linking theory and practice, Those Who Can: Why Master Teachers Do What They Do illustrates what instructional excellence looks like by detailing what elite instructors do and as importantly, why their pedagogical choices lead to uncommonly good student results. Thoughtfully written, clearly explained, and thoroughly researched by a master educator with more than four decades of public school experience, Those Who Can provides school administrators, education students, and teachers of all experience levels with a no-nonsense practical blueprint indicating what instructional strategies promote learning, what approaches undermine learner performance, and the behavioral principles underlying both outcomes. In demystifying the so-called art of instruction, the approaches outlined in Those Who Can will improve student achievement with little investment other than the time it takes to read the book, the courage to implement its concepts, and an open-minded willingness to challenge the educational status quo of what is for the instructional promise of what could be."

A Casebook in Interprofessional Ethics Jeffrey P. Spike 2016-02-13 The first ethics casebook that integrates clinical ethics (medical, nursing, and dental) and research ethics with public health and informatics. The book opens with five chapters on ethics, the development of interprofessional ethics, and brief instructional materials for students on how to analyze ethical cases and for teachers on how to teach ethics. In today's rapidly evolving healthcare system, the cases in this book are far more realistic than previous efforts that isolate the decision-making process by professions as if each is not embedded in a larger context that involves healthcare teams, hospital policies, and technology. The central claim of this book is that ethics is an important common ground for all of the health professions. Furthermore, when we recognize that our professions converge upon a common goal we will find less conflict and more pleasure in working together.
