Thermal and Mechanical Treatments for Nickel and Some Nickel-base Alloys: Effects on Mechanical Properties

Albert M. Hall 1972 "The Columbus Laboratories, Battelle Memorial Institute, originally prepared these reports in 1965 and later revised them, updating the information to include the latest technology through 1968. This report is one of a series pertaining to the fabricating of nickel, nickel-base, and cobalt-base alloys. This report deals with heat treating and working nickel and nickel-base alloys, and with the effects of these operations on the mechanical properties of the materials. The subjects covered are annealing, solution treating, stress relieving, stress equalizing, age hardening, hot working, cold working, combinations of working and heat treating (often referred to as thermomechanical treating), and properties of the materials at various temperatures. The equipment and procedures used in working the materials are discussed, along with the common problems that may be encountered and the precautions and corrective measures that are available."--Foreword.

Structures of Change in the Mechanical Age Ross Thomson 2009-03-24 The United States registered phenomenal economic growth between the establishment of the new republic and the end of the Civil War. This study argues that the transition of the United States from an agrarian economy in 1790 to an industrial leader in 1865 relied fundamentally on the spread of technological knowledge within and across industries.

Food Process Engineering F. Xavier Malcata 2020-01-29 This book is designed to serve as the core textbook for the food engineering course required in all food science programs. It provides a guided study based on modeling the physicochemical changes that liquid/solid food items experience as they are transformed from their original, natural form into elaborated forms eventually made available to consumers. Unlike other textbooks that provide sequential studies on various types of processing, this book entails a problem-oriented approach, focusing on the product rather than the operation.
