Film and Television After DVD James Bennett 2008-06-30 Heralded as "the most significant invention [for film] since the coming of sound" (The Observer 2003), by 2005 DVD players were in approximately 84 million homes in the US, making it the "fastest selling item in history of US consumer electronics market" (McDonald 2007: 135). This book examines the phenomenal growth of DVDs in relation to the cultures, economies, texts, audiences and histories of film, television and new media. Film and Television After DVD brings together a group of internationally renowned scholars to provide the first focused

academic inquiry into this important technology. The book picks up on key issues within contemporary media studies, making a particularly significant contribution to debates about convergence and interactivity in the digital media landscape. Essays consider DVD as a technology that exists outside the boundaries of "new" and "old" media, examining its place within longer histories of home film cultures and production practices of the film and television industries, whilst also critically evaluating what is genuinely "new" about digital media technologies. From DVDs to downloading, peer-to-peer networking and HD-DVD, this book speaks of the rapidly evolving digital mediascape. Ultimately, *Film and Television After DVD* is a book that considers the convergence of film, television and new media and their academic disciplines through the DVD as a distinct cultural object, pointing to persistent questions in the study of audiovisual culture that will remain intriguing long after the shelf-life of the DVD itself.

The Abe Restoration Craig Mark 2016-05-12 Shinzo Abe returned to office as Prime Minister of Japan 2012, leading the Liberal Democratic Party (LDP) for a second time. This book examines how Abe has sought a restoration of Japanese primacy at three levels: political, through the restoration of the traditional postwar parliamentary dominance of the LDP; economic, through his signature policy known as "Abenomics," which aims to restore Japan's economic prosperity and end decades-long deflationary stagnation; and strategic, in which Abe wishes to restore Japan to a prominent role in regional and international security by reinterpreting and potentially altering or even abolishing Article 9 of the constitution, which would allow greater deployment of the Japanese Self-Defense Forces. This study argues that Abe has achieved overall political dominance, being re-elected in 2014, and has passed controversial legislation allowing Japan to exercise collective self-defense, but it also contends that Abenomics has yet to lift the country out of its long-running deflationary stagnation.

World Scientific Reference On Globalisation In Eurasia And The Pacific Rim (In 4 Volumes) 2015-11-06 This multi-volume set focuses on a key region of the world which contains four of the biggest emerging economies, a large number of highly dynamic small- and medium-sized emerging economies, and one of the leading advanced industrial countries. It is a region which contains some of the biggest hydrocarbon and mineral deposits in the world, and some of the most energy- and metal-hungry economies in the world. With half the world's population, it is one of the most dynamic regions of the globe in terms of population movement, providing a key focus of foreign investment, both inwards and outwards, with a high degree of technological dynamism. The region plays a central role in the industrial supply networks of the globe. In four volumes, focusing on, respectively, foreign investment, innovation, energy and migration, the set focuses on each of the main elements in the production system in turn — capital, innovation, raw materials and labour. Volume 1 studies patterns of interchange of financial and direct investment within the region, focusing on governance, the development of supply chains, and technology transfer. In Volume 2, the technology theme becomes dominant, with a special focus on digital technology. It includes technical issues like mobile communications standardisation, developmental dimensions, including the role of clusters and science parks, and political economy issues like the rise of techno-nationalism. Volume 3 turns to energy issues — not just issues of supply and demand, but also key problems of climate change, security and sustainability across the Eurasian and Asian landmass. Volume 4 presents the human dimension, looking at people in movement, as workers, citizens, men, women, or colonisers. Among the key issues discussed are the migration from country to town in China, the 'greying' of countries like Japan, the effect of war on migration, marriage migration, human trafficking and the depopulation of the Russian Far East. The set is a must-have for anyone keen to understand the region whose manufacturing core can be described, without exaggeration, as the 'workshop of the world' of the twenty-first century.

Everyday People Al Sullivan 2001 In this time of ever-shorter news stories telling us everything that's wrong with the world, it's a nice change of pace to read about someone like Felix Addeo, who takes time out of his busy schedule to teach middle school kids what it's like to be an accountant. Or biomedical engineer Lois Ross, who twice a year leads a group of volunteers to clean up a local pond. These are just two of the ordinary, yet extraordinary, people profiled in this collection of feature articles by New Jersey reporter Al Sullivan. Through richly detailed stories--a kind of writing that has all but disappeared from our local newspapers--about small-town people in extraordinary situations, Sullivan depicts the characters that enliven life in the Garden State. While his stories always have a strongly local feel, each contains an element of the universal that draws in readers whose interest lies not in a specific location, but in the diverse experiences and stories of people who live in and shape a community. Sullivan has written about people from nearly every walk of life,

from minister to prostitute, from jail warden to undercover cop. *Everyday People* takes readers to the funeral of AIDS activist Ronald West, Jr., and to the office of James Delson, owner and operator of Jersey City's Toy Soldier Company. You'll follow Sullivan from the Hoboken workshop of violin maker Jon Van Kouwenhoven to the rooftops that are the "office" of chimney sweep Ron Simpson. You'll go on a ride with the Glen Ridge Volunteer Ambulance Squad and along the Hackensack River with Captain Bill Sheehan, founder of the Hackensack Estuary and River Tender's Corporation, which monitors the river's ecology. You don't have to live in New Jersey to recognize the people in Sullivan's stories. They are the librarians and tax assessors, attorneys and hotdog vendors, firefighters and bee keepers, poets and politicians, that make every American town special. In *Everyday People*, Sullivan records their stories for us all to read and remember.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

The International Handbook on Environmental Technology Management Dora Marinova 2008-01-01 This is an excellent textbook, suitable as a core text for environmental engineers and environmental scientists but equally it should, in my opinion, be compulsory reading for all researchers, practitioners, and policy-makers regardless of their discipline because it has relevance for all. In fact, the book is so lively and understandable that everyone and anyone could and should read it. . . . Clearly written by a team of recognised environmental authors drawn from around the world, it guides the reader through current thinking on the tools and techniques industry. . . . As an academic, it is a delight to find a book to recommend that I know students will enjoy and one which addresses so many different elements of a diversity of university courses, while covering the most important areas of environmental technology and management. I am certainly using it to enhance and update the content of some of my own lectures. Susan Haile, *International Journal of Sustainable Engineering* This substantial collection draws together a very wide variety of literatures and practices. . . . I would expect this book to be a popular purchase by academic libraries, principally as a core text. The Evolution of Economies Patrick Spread 2015-12-22 It is clear even to casual observation that economies evolve from year to year and over centuries. Yet mainstream economic theory assumes that economies always move towards equilibrium. One consequence of this is that mainstream theory is unable to deal with economic history. The Evolution of Economies provides a clear account of how economies evolve under a process of support-bargaining and money-bargaining. Both support-bargaining and money-bargaining are situation-related - people determine their interests and actions by reference to their present circumstances. This gives the bargaining system a natural evolutionary dynamic. Societies evolve from situation to situation. Historical change follows this evolutionary course. A central chapter of the book applies the new theory in a re-evaluation of the industrial revolution in Britain, showing how specialist money-bargaining agencies, in the form of companies, evolved profitable formats and displaced landowners as the leading sources of employment and economic necessities. Companies took advantage of the evolution of technology to establish effective formats. The book also seeks to establish how it came about that a 'mainstream' theory was developed that is so wildly at odds with the observable features of economic history and economic exchange. Theory-making is described as a process of 'intellectual support-bargaining' in which theory is shaped to the interests of its makers. The work of major classical and neoclassical economists is contested as incompatible with the idea of an evolving money-bargaining system. The book reviews attempts to derive an evolutionary economic theory from Darwin's theory of evolution by natural selection. Neoclassical economic theory has had enormous influence on the governance of societies, principally through its theoretical endorsement of the benefits of 'free markets'. An evolutionary account of economic processes should change the basis of debate. The theory presented here will be of interest immediately to all economists, whether evolutionary, heterodox or neoclassical. It will facilitate the work of economic historians, who complain that current theory gives no guidance for their historical investigations. Beyond the confines of professional theory-making, many will find it a revelatory response to questions that have hitherto gone unanswered.

The Biometric Industry Report - Forecasts and Analysis to 2006 M Lockie 2012-12-02 Biometrics - the physiological and/or behavioural characteristics that can be used to verify the identity of an individual - are no longer just being used in high security locations; they are now in use in major, mainstream government and commercial applications. Since September 11, the heightened awareness of security issues is driving forward the adoption of biometrics within numerous application environments. Coupled with a dramatic decrease in the price of such systems and the formulation of comprehensive industry standards, the market looks set for rapid growth over the next 5 years. The second edition of The Biometric Industry Report - Forecasts and Analysis to 2006 examines the current use and future growth of biometrics. It analyses the trends in markets, technologies and industry structure and profiles the major players. The report provides key market statistics and forecasts essential for companies to plot their future growth strategies. Globalisation and Advertising in Emerging Economies Lynne Ciochetto 2013-10-11 Brazil, Russia, India and China are four of the largest and most dynamic contemporary emerging economies in the world. Strong economic growth in each of these economies has been accompanied by the expansion of the advertising and consumer goods sectors. Using a series of country studies, this book explores the dynamics of global capitalism from the perspective of global advertising. The book highlights the on-going expansion of advertising and consumerism against the wider socio-economic, political and cultural contexts. It provides fresh insights about contemporary global priorities, and argues that advertising plays a key role linking culture and the economy. By presenting individual case studies of advertising campaigns, it offers examples of the globalisation of specific brands. Environmental implications of the expansion of advertising and its role in stimulating consumerism are explored in the context of the four emerging economies. The book compares and contrasts the individual country profiles, and makes an assessment of the validity of the argument regarding their projected importance and the likelihood of their future dominance of the global economy.
