Bibliography of Microwave Optical Technology A. F. Harvey 2012-12-06 Although microwaves and coherent optics, being two of the largest and most useful branches of electrical engineering to emerge technologically, are usually considered as distinct subjects, many of the underlying fundamental principles, scientific achievements, and practical applications have common features. Following the evolvement of the initial principles and techniques during the closing decade of the last century, microwave engineering has long matured to a stage of ready availability of components, automation and accuracy of measurement, economical manufacturing methods, and application of sophisticated systems. Further, this development of electromagnetic phenomena having spatial and temporal coherence has, based on several centuries of study and practice of noncoherent light, in the last two decades reached the optical region. Hence, it is now practicable to consider a comprehensive treatment of these two fields, division being made by subject matter rather than by the artificial distinctions of frequency and/or wavelength ranges. However, a full text on the combined subjects would be very large and unwieldy and, thus, this Bibliography is presented in the hope that it will prove useful as a compact reference source to a large body of workers and, by putting forward the latest scientific and technical advances, stimulate a multi-disciplinary approach. The material of the book commences with the fundamentals of radiation and matter, progressing through components and devices, amplification and generation, transmission, reception and processing of information, and methods of measurement to conclude with a wide range of applications.

EU External Relations Law Ramses A Wessel 2020-04-02 The first edition of this seminal textbook made a significant impact on the teaching of EU external relations law. This new edition retains the hallmarks of that success, while providing a fully revised and updated account of this burgeoning field. It offers a dual perspective, looking at questions from both the EU constitutional law perspective (the principles underpinning EU external action, the EU's powers, and the role of the Court of Justice of the EU); and the international law perspective (the effect of international law in the EU legal order and the position of the EU in international organisations such as the WTO). A number of key substantive policy areas are explored, including trade, security and defence, police and judicial cooperation, the environment, human rights, and development cooperation. Taking a 'text, cases and materials' approach, it allows students to gain a thorough understanding of milestones in the evolution of EU law in this area, their judicial interpretation and scholarly appraisal. Linking these pieces together through the authors' commentary and analysis ensures that students are given the necessary guidance to properly position and digest these materials. Lastly, each chapter concludes with a section entitled 'The Big Picture of EU External Relations Law', which weaves together the diverse and complex materials into

a coherent whole and stimulates critical discussion of the topics covered.

Climate Change and Impacts in the Pacific Lalit Kumar 2020-01-31 This edited volume addresses the impacts of climate change on Pacific islands, and presents databases and indexes for assessing and adapting to island vulnerabilities. By analyzing susceptibility variables, developing comprehensive vulnerability indexes, and applying GIS techniques, the book's authors demonstrate the particular issues presented by climate change in the islands of the Pacific region, and how these issues may be managed to preserve and improve biodiversity and human livelihoods. The book first introduces the issues specific to island communities, such as high emissions impacts, and discusses the importance of the lithological traits of Pacific islands and how these physical factors relate to climate change impacts. From here, the book aims to analyze the various vulnerabilities of different island sectors, and to formulate a susceptibility index from these variables to be used by government and planning agencies for relief prioritization. Such variables include tropical cyclones, built infrastructures, proximity to coastal areas, agriculture, fisheries and marine resources, groundwater availability, biodiversity, and economic impacts on industries such as tourism. Through the categorization and indexing of these variables, human and physical adaptation measures are proposed, and support solutions are offered to aid the inhabitants of affected island countries. This book is intended for policy makers, academics, and climate change researchers, particularly those dealing with climate change impacts on small islands.

Dalhuisen on Transnational and Comparative Commercial, Financial and Trade Law Volume 2 Jan H Dalhuisen 2022-04-07 "... remains a must read for practitioners and academics interested in more than the substantive law of trans-border commercial activity." (King's Law Journal) Volume 2 of this new edition covers the transnationalisation of dispute resolution, especially arbitration, and contains a critical analysis of the main challenges to its success, continuing credibility, and effectiveness. The volume distinguishes between commercial, financial, and foreign investment arbitration and concentrates on the status, role, and reasoning of international arbitrators, their limited powers especially in matters of public policy and in property matters, the threat of judicialisation, and the need to connect with mediation and a settlement ethos. The complete set in this magisterial work is made up of 6 volumes. Used independently, each volume allows the reader to delve into a particular topic. Alternatively, all volumes can be read together for a comprehensive overview of transnational comparative commercial, financial and trade law.

The Routledge Handbook of Tourism and Sustainability C. Michael Hall 2015-02-11 Routledge Handbook of Tourism and Sustainability from C. Michael Hall, Stefan Gössling, Daniel Scott is one of the winners of the ITB BookAwards 2016 in the category Specialist tourism literature! Sustainability remains one of the major issues in tourism today. Concerns over climate and environmental change, the fallout from the global economic and financial crisis, and the seeming failure to meeting UN Millennium development goals have only reinforced the need for more sustainable approaches to tourism, however they be defined. Given the centrality of sustainability in tourism curricula, policies, research and practice it is therefore appropriate to prepare a state of the art handbook on the relationship between tourism and sustainability. This timely Handbook of Tourism and Sustainability is developed from specifically commissioned original contributions from recognised authors in the field, providing a systematic guide to the current state of knowledge on this area. It is interdisciplinary in coverage and international in scope through its authorship and content. The volume commences with an assessment of tourism's global environmental, e.g. climate,

emissions, energy use, biodiversity, water use, land use, and socio-economic effects, e.g. economic impacts, employment and livelihoods, culture. This then provides the context for sections outlining the main theoretical frameworks and constructs that inform tourism and sustainability, management tools and approaches, and the approaches used in different tourism and travel industry sectors. The book concludes by examining emerging and future concerns in tourism and sustainability such as peak-oil, post-carbon tourism, green economy and transition tourism. This is essential reading for students, researchers and academics interested in the possibilities of sustainable forms of tourism and tourism's contribution to sustainable development. Its assessment of tourism's global impact along with its overviews of sectoral and management approaches will provide a benchmark by which the sustainability of tourism will be measured for years to come.

The Chartist Movement Mark Hovell 1966 "Chartism was a Victorian era working class movement for political reform in Britain between 1838 and 1848. It takes its name from the People's Charter of 1838. The term "Chartism" is the umbrella name for numerous loosely coordinated local groups, often named "Working Men's Association," articulating grievances in many cities from 1837. Its peak activity came in 1839, 1842 and 1848. It began among skilled artisans in small shops, such as shoemakers, printers, and tailors. The movement was more aggressive in areas with many distressed handloom workers, such as in Lancashire and the Midlands. It began as a petition movement which tried to mobilize "moral force", but soon attracted men who advocated strikes, General strikes and physical violence, such as Feargus O'Connor and known as "physical force" chartists."--Wikipedia

Multimodal Transport Law Marian Hoeks 2010-01-01 We only have to look around us on the road while we travel to work or home, or to use our eyes at a railway station to know that the transport of goods takes up a lot of the room our modern day infrastructures provide. Sometimes perhaps a little too much; nowadays congestion seems to be the rule rather than the exception. This is an uncomfortable side effect of the explosive growth freight transport has experienced the last few decades<sup>1</sup>. Modern day transport offers a considerable array of possibilities; possibilities that are for the most part taken for granted by the general public that enjoys their benefits. The average European would not be surprised to learn that the fruit on offer in the local supermarket originates from another continent for instance. The idea that most of the things we use in our daily routine stem from a distant source, such as a cell phone from Japan, a trendy pair of designer jeans made in China or a glass of Australian wine, seems completely natural to us. Clearly the contemporary transport industry offers us a lot of benefits besides such discomforts as congestion and pollution. In earlier times, before machinery such as the steam engine had been invented it was hardly cost effective or even feasible when it came to perishables to carry goods halfway around the world if they were not at least valuable and extraordinary<sup>2</sup>. The limitations set on trade by the transport structures available did more however than simply curtail the range of affordable products on offer for the public. They also had a negative effect on the location of the industry, limited transport possibilities and forced production to take place near or in heavily populated areas to secure the necessary workforce and market possibilities. After all, industrial decentralisation is only feasible if there is an infrastructure capable of supporting a cost effective movement of goods and employees<sup>3</sup> ...

The second chapter covers the transnationalisation of dispute resolution in that order, especially international arbitration, and contains a critical analysis of the main challenges to its success, continuing credibility, and effectiveness. All three volumes may be purchased separately or as part of a single set.

Airport Economics in Latin America and the Caribbean Tomás Serebrisky 2011-12-05 Traditionally, air transport infrastructure in Latin America and the Caribbean (LAC) was exclusively under government ownership and management. Starting in the late 1990s, several Latin American countries implemented innovative public-private partnerships (PPP) that transferred the financing and management of air transport sector infrastructure to the private sector. This book presents the findings of a first-ever, comprehensive study of how LAC region airports have evolved during this notable period of transition in airport ownership. It is an unbiased, positive analysis of what happened, rather than a normative analysis of what should be done to reform the airport sector or to attract private participation. It takes the first step in response to the need for more conclusive information about the influence of airport ownership on economic performance. The book is centered around the study of three dimensions of performance: productive efficiency, institutional set up for the governance of the sector, and financing of airport PPPs. Using rigorous analytical tools, this book answer a series of key questions to evaluate the introduction of private sector participation in the Latin American airport sector: Are LAC airports technically efficient? How has efficiency evolved in the last decade? Are privately-run airports more efficient than state-operated airports? How do independent regulators compare with government agencies in accountability, transparency, and autonomy? How has the level and structure of aeronautical tariffs changed in recent years? The main audience of this book are air transport practitioners, transport regulators, decisionmakers in transport ministries, and PPP units and academics.

Aviation Noise Impact Management Laurent Leylekian 2022-03-15 This open access book provides a view into the state-of-the-art research on aviation noise and related annoyance. The book will primarily focus on the achievements of the ANIMA project (Aviation Noise Impact Management through Novel Approaches), but not exclusively. The content has a broader theme in order to encompass. regulation issues, the ICAO (International Civil Aviation Organization) balanced approach, progresses made on technologies and reduction of noise at source, impact of possible future civil supersonic aircraft, land-use planning issues, as well as the core topics of the ANIMA project, i.e. impact on human beings, annoyance, quality of life, health and findings of the project in this respect. This book differs from traditional research programmes on aviation noise as the authors endeavour, not to lower noise at source, but to reduce the annoyance. This book examines these non-acoustic factors in an effort to help those most affected by aviation noise – communities living close to airports, and also help airport managers, policy-makers, local authorities and researchers to deal with this issue holistically. The book concludes with some recommendations for EU, national and local policy-makers, airport and aviation authorities, and more broadly a scientifically literate audience. These recommendations may help to identify gaps for progress in terms of research but also genuine implementation actions for political and regulatory authorities.
